Mathematical Structures for Computer Graphics Steven J. Janke

A comprehensive exploration of the mathematics behind the modeling and rendering of computer graphics scenes

"Mathematical Structures for Computer Graphics" presents an accessible and intuitive approach to the mathematical ideas and techniques necessary for two- and three-dimensional computer graphics. Focusing on the significant mathematical results, the book establishes key algorithms used to build complex graphics scenes. Written for readers with various levels of mathematical background, the book develops a solid foundation for graphics techniques and fills in relevant graphics details often overlooked in the literature. Rather than use a rigid theorem/proof approach, the book provides a flexible discussion that moves from vector geometry through transformations, curve modeling, visibility, and lighting models. "Mathematical Structures for Computer Graphics" also includes: Numerous examples of two- and three-dimensional techniques along with numerical calculations Plenty of mathematical and programming exercises in each chapter, which are designed particularly for graphics tasks Additional details at the end of each chapter covering historical notes, further calculations, and connected concepts for readers who wish to delve deeper Unique coverage of topics such as calculations with homogeneous coordinates, computational geometry for polygons, use of barycentric coordinates, various descriptions for curves, and L-system techniques for recursive images "Mathematical Structures for Computer Graphics" is an excellent textbook for undergraduate courses in computer science, mathematics, and engineering, as well as an ideal reference for practicing engineers, researchers, and professionals in computer graphics fields. The book is also useful for those readers who wish to understand algorithms for producing their own interesting computer images.

From reader reviews:

Richard Kitterman:

Book is to be different per grade. Book for children until eventually adult are different content. As it is known to us that book is very important for us. The book Mathematical Structures for Computer Graphics has been making you to know about other know-how and of course you can take more information. It is very advantages for you. The e-book Mathematical Structures for Computer Graphics is not only giving you far more new information but also for being your friend when you feel bored. You can spend your personal spend time to read your reserve. Try to make relationship with all the book Mathematical Structures for Computer Graphics. You never truly feel lose out for everything when you read some books.

Duncan Houghton:

Playing with family in a park, coming to see the sea world or hanging out with pals is thing that usually you may have done when you have spare time, subsequently why you don't try point that really opposite from that. One particular activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you are ride on and with addition of knowledge. Even you love Mathematical Structures for Computer Graphics, you can enjoy both. It is excellent combination right, you still desire to miss it? What kind of hang-out type is it? Oh occur its mind hangout fellas. What? Still don't have it, oh come on its known as reading friends.

Jennifer Chambers:

Reading a book for being new life style in this season; every people loves to learn a book. When you examine a book you can get a great deal of benefit. When you read guides, you can improve your knowledge, due to the fact book has a lot of information upon it. The information that you will get depend on what forms of book that you have read. If you need to get information about your examine, you can read education books, but if you want to entertain yourself look for a fiction books, this sort of us novel, comics, and also soon. The Mathematical Structures for Computer Graphics will give you new experience in looking at a book.

Michael Kenney:

With this era which is the greater man or woman or who has ability to do something more are more important than other. Do you want to become considered one of it? It is just simple method to have that. What you need to do is just spending your time almost no but quite enough to enjoy a look at some books. Among the books in the top collection in your reading list will be Mathematical Structures for Computer Graphics. This book that is certainly qualified as The Hungry Hillside can get you closer in getting precious person. By looking way up and review this guide you can get many advantages.
