Pseudo Differential Operators and Markov Processes, Volume II: Generators and Their Potential Theory N Jacob, Niels Jacob

In this volume two topics are discussed: the construction of Feller and L_p -sub-Markovian semigroups by starting with a pseudo-differential operator, and the potential theory of these semigroups and their generators. The first part of the text essentially discusses the analysis of pseudo-differential operators with negative definite symbols and develops a symbolic calculus; in addition, it deals with special approaches, such as subordination in the sense of Bochner. The second part handles capacities, function spaces associated with continuous negative definite functions, L_p -sub-Markovian semigroups in their associated Bessel potential spaces, Stein's Littlewood-Paley theory, global properties of L_p -sub-Markovian semigroups, and estimates for transition functions.
