Modeling Embedded Systems and SoC's: Concurrency and Time in Models of Computation (Systems on Silicon) Axel Jantsch

Over the last decade, advances in the semiconductor fabrication process have led to the realization of true system-on-a-chip devices. But the theories, methods and tools for designing, integrating and verifying these complex systems have not kept pace with our ability to build them. System level design is a critical component in the search for methods to develop designs more productively. However, there are a number of challenges that must be overcome in order to implement system level modeling.

This book directly addresses that need by developing organizing principles for understanding, assessing, and comparing the different models of computation necessary for system level modeling. Dr. Axel Jantsch identifies the representation of time as the essential feature for distinguishing these models. After developing this conceptual framework, he presents a single formalism for representing very different models, allowing them to be easily compared. As a result, designers, students, and researchers are able to identify the role and the features of the "right" model of computation for the task at hand.

*Offers a unique and significant contribution to the emerging field of models of computation

*Presents a systematic way of understanding and applying different Models of Computation to embedded systems and SoC design

*Offers insights and illustrative examples for practitioners, researchers and students of complex electronic systems design.

From reader reviews:

Joycelyn Chambers:

The book untitled Modeling Embedded Systems and SoC's: Concurrency and Time in Models of Computation (Systems on Silicon) is the reserve that recommended to you to study. You can see the quality of the guide content that will be shown to anyone. The language that writer use to explained their ideas are easily to understand. The article author was did a lot of research when write the book, and so the information that they share for you is absolutely accurate. You also could get the e-book of Modeling Embedded Systems and SoC's: Concurrency and Time in Models of Computation (Systems on Silicon) from the publisher to make you more enjoy free time.

Christina Ochs:

Spent a free time and energy to be fun activity to do! A lot of people spent their down time with their family, or their very own friends. Usually they performing activity like watching television, planning to beach, or picnic in the park. They actually doing same task every week. Do you feel it? Will you something different to fill your free time/ holiday? Might be reading a book is usually option to fill your free time/ holiday. The first thing that you will ask may be what kinds of book that you should read. If you want to test look for book, may be the reserve untitled Modeling Embedded Systems and SoC's: Concurrency and Time in Models of Computation (Systems on Silicon) can be fine book to read. May be it is usually best activity to you.

Bobbie Freeman:

People live in this new time of lifestyle always try to and must have the spare time or they will get lots of stress from both everyday life and work. So , when we ask do people have extra time, we will say absolutely sure. People is human not just a robot. Then we consult again, what kind of activity are there when the spare time coming to you of course your answer will unlimited right. Then do you try this one, reading books. It can be your alternative throughout spending your spare time, typically the book you have read is Modeling Embedded Systems and SoC's: Concurrency and Time in Models of Computation (Systems on Silicon).

Tom Salgado:

Reading a book make you to get more knowledge from the jawhorse. You can take knowledge and information from the book. Book is created or printed or descriptive from each source this filled update of news. In this modern era like now, many ways to get information are available for a person. From media social such as newspaper, magazines, science e-book, encyclopedia, reference book, story and comic. You can add your knowledge by that book. Are you ready to spend your spare time to open your book? Or just trying to find the Modeling Embedded Systems and SoC's: Concurrency and Time in Models of Computation (Systems on Silicon) when you needed it?
