The Elgar Companion to Transaction Cost Economics

The Elgar Companion to Transaction Cost Economics

Since its emergence in the 1970s, transaction cost economics (TCE) has become a leading approach in the research on contracts, firm organization and strategy, antitrust, marketing, inter-firm collaboration and entrepreneurship. With contributions by leading scholars in economics, law and business administration - including Oliver E. Williamson, recipient of the 2009 Nobel Prize in economics for his development of the transaction cost approach - this volume reviews the latest developments in TCE and applies them to contemporary theoretical and empirical problems. Beginning with an introductory essay by the editors, the book covers precursors and influences, core concepts, applications, alternatives and critiques. The contributing authors describe, extend and assess the transaction cost approach to economic organization, and examine the role of TCE in the larger legal, economic, and managerial literatures on organizations and institutions. An original and comprehensive volume, the Companion introduces the novice and informs the specialist about TCE's fundamental elements, recent controversies and new developments. An accessible and astute delineation of how transaction cost economics offers important and unique insights into key organizational, managerial and societal issues of our day, the Companion will be of particular interest to practitioners of business law and antitrust, corporate executives and management consultants. Additionally, academic researchers, scholars and students of economics, business and law will find it an invaluable reference.
